

PORTABLE EMISSION RESULTS KIT

perk™

It's easy. **Connect** to your car.
Report results.
Return.

perk easily and quickly lets motorists test vehicle emissions through a wireless module that connects to and communicates with the vehicle's OBD link. With the vehicle running, a motorist simply plugs the device to the OBD connector. Once testing is complete, the main unit displays a green light and sounds an audible buzzer. Alphanumeric codes are displayed on the LED screen, which the driver submits with the VIN either by phone or internet. From there a central database analyzes the information to determine if the test result is valid and whether the vehicle passed the OBD test.

perk can be picked up and returned to designated locations. Drivers have the freedom to complete the testing anytime, anywhere.
